Abstract.

An entrepreneur is often referred to as someone who has started a business. Furthermore, when the term entrepreneur is heard, the tendency is to attribute it to the person who started the investment. In fact, the formal definition of entrepreneurship is the process of starting a business or organization to be profitable or to meet social needs. In this research, an integrated literature review has been used to study economics and economic growth. For this purpose, numerous books and articles published in scientific journals and conferences, as well as master's theses and doctoral dissertations were studied, which as a result, the impact of entrepreneurship on economic growth has been fully expressed. The effects of globalization of banks and the effects of entrepreneurship on the globalization of banks were also explained.

Keywords: Entrepreneurship, Economic Growth, Globalization of Banks
