Abstract

In this article, we explore the experiences of global and Iranian case studies in urban damaged tissue interventions. Since the study of the experiences of different countries is very wide and extensive, and it is not possible to provide and refer to all of them, and it is beyond the scope of this research, the overall results of the studies have been tried out as concise and applicable propositions in the form of the table below. To be presented.

Keywords: Damaged tissue, City, Urban Design, Experience

Introduction

The mode of intervention in different countries, according to historical backgrounds, has been different from the current political, economic, and social status. At the same time, some common principles can be identified. The purpose of this section is to provide an understanding of the principles, policies, and objectives adopted by different countries in order to use them in formulating the quantitative policy of intervention in the context.

Discussion

Since the study of the experiences of different countries is very wide and extensive, and it is not possible to present them to all of them, and not out of the interest of the present research, it has been attempted to state the general results of studies as concise and applicable propositions in the form of tables in Continued; "Table 1".

The practices used to intervene in ancient texts in this country have been quite conservative and monopolistic, and are generally distinct from other European countries. The main purpose of interventions in the UK was first to create a healthy environment and then protect it. The purpose is to develop a tourism industry and attract tourists. Therefore, it has its own rebuilding and modernization. Economically, most of the projects have taken into account the self-sufficiency of the urban complex. From a cultural point of view, attention has also been paid to cultural values of texture, social considerations, strengthening of social skills and participation of the people targeted by the planners.

Table 1. Goals and policies of intervention in 2 cities in the UK

City	The main purpose	Economic goals	Social goals	Cultural goals	Physical policies	Traffic Policies	Urban Facilities
Chichester	Continuity of the physical space of the city and refurbishment and renovation	-	Ensuring the presence of residents	Preserving the cultural identity of the city And pay attention to the dimension of tourism	Improve the city's image Drafting rules for the preservation of historical collections Restoration details Modernization and accurate protection of views	- Diversion of traffic jams from the old part - Enhance pedestrian access	- Creating facilities for tourism, recreation and construction - Health facilities
