Abstract

Environmental psychology can be understood as the psychology of man, his environment, and his background. Some believe that environmental psychology is a branch of psychology, in the present being a discipline between architecture, urban planning, urban design, and psychology. However, it can be said that environmental psychology examines the relationship between the physical environment, behavior and human experience. Environmental psychology is a science that has been widely considered in recent years. In this article, we will have an overview on the knowledge of environmental psychology and ideologies and its impact on the environment.
