Abstract

In recent decades there has been a boom in medical publication all across the world. There are numerous medical journals whose articles tend to form the basis of the art and science of medicine. Along with this widespread upward trend, ethics of conducting and publishing medical research have undergone natural evolution. This article intends to review some of the existing publication related to the standards of medical and scientific research and publishing articles in medical journals. Paying meticulous attention to these standards guarantees credibility and originality of medical articles and the publishing journals.
